

DELTA 250 TRAILER

The **DELTA 250 TRAILER** is a self-aligning hydraulic mirror welding machine, suitable for welding pressure pipes for water, gas and other liquids, for diameters **75 to 250 mm**. This device operates according to the international standards ISO 21307 HIGH PRESSURE and ASTM F2620 and is capable of welding fittings such as bends, tees, Y pieces and collar bushings. To enable welding in trenches, the flat planer is easy to remove from the wheelbase in order to reduce the overall dimensions of the machine and facilitate the loading/unloading process.

The **DELTA 250 TRAILER** includes:

- a machine frame mounted on a trailer, easy to remove from the wagon in order to be able to work in the trench.
- the "Smart-lock" locking system that allows the inserts to be changed in a few seconds.
- a built-in electric plane planer, equipped with a safety switch to prevent accidental starting, a thermal circuit breaker to protect the engine, an ergonomic docking system and on/off switches.
- a removable heating plate with Teflon coating (PTFE), equipped with an independent thermometer to check the working temperature
- a holder for the heating plate, with a high-temperature bag, which also prevents the heating element from being scratched.
- a detachable EASY LIFE control panel. This panel controls the welding phases and allows the operator to program and control all welding cycles in a simple and intuitive way. It also controls the temperature of the heating plate, which is always visible on the display. It includes a GPS and data logging system to store the welding data. The EASY LIFE system can store up to 4000 welding reports and can pre-set up to 20 custom welding cycles. The USB port is used for downloading welding reports in PDF via a printer or for uploading an upgrade.
