

WELDING TENT

These waterproof and fire retardant tents are very useful when welding pipes. They are very quick to set up. The tents of 2m10 and 2m50 are square, have 1 opening with zipper to the very top, the other side has a zipper up to 1m height, so that a tube can be pulled through. The tent of 2m70 is a hexagon tent and has 2 zippers all the way to the top.

These tents are packed in a handy and compact bag. For the biggest model, a set is included to secure the tent.

The tents can be ordered with or without a logo.
